

COMPUTERIZED LANGUAGE LEARNING

The screenshot shows a software window titled "Learning French" with a subtitle "Pronunciation: Meeting and Greeting 2". The main text on the screen asks "Parlez-vous anglais? Do you speak English?". Below this, there are two rows of audio analysis graphs. The top row is labeled "Native Speaker" and the bottom row is labeled "Your Voice". Each row contains four graphs: "Wave Form", "Pitch", "Fricatives", and "Vowels". To the right of these graphs is a "Your Pronunciation" meter, which is a semi-circular gauge with a needle pointing to a green section. At the bottom of the interface, there are buttons for "Record", "Play Sound", "Previous Card", "Next Card", and "Done". A small help icon and a link "What do these indicators mean?" are also visible.

This is a learning concept in which the learner views the foreign language on the computer screen and translation into English just below it. The learner clicks and hears the pronunciation through the speakers (or headset) and then repeats into the microphone. His pronunciation is compared with that of a native speaker and evaluated by a graph and a pronunciation meter. This makes it very easy to master a foreign language within a very short period.

Note that this is not one of those temporary 45-days trial versions found on the internet. It is a permanent, fully comprehensive and very detailed language program

The centre offers 25 languages including French, Spanish, German, Dutch, Italian, Chinese, Japanese, Arabic, Kiswahili, Portuguese etc. Each language has 2 levels with 153 lessons per level. The two levels are quite comprehensive and no further tuition is required.

Omni-Tech also offers a language translator that translates directly as one types into the selected language. The program has 6 inbuilt languages i.e French, Spanish, German, Italian, Portuguese and English.

For those unable to attend classes at the centre due to their busy schedule (or distance) the program can be installed into their laptops and they can learn at their own place, time and pace. The learning itself is not online.

Omni-Tech has trained and installed the language programs for the staff of major NGOs (in Kenya and Sudan), international and UN organizations plus many other individual clients whose references we can give you.

Its an amazing Concept.
